

Alternatively, Requester may elect to obtain a license to intellectual property developed from the assistance. If multiple Requesters are participating in a single project that results in the development of intellectual property, each may elect to obtain nonexclusive licenses to or co-ownership of inventions. Requester(s) shall pursue patent applications for any inventions herein at their own expense. The ownership of such inventions by Requester(s) is subject to U.S. Government use rights and the Laboratory's obligations and procedures for transferring intellectual property rights under its Prime Contract with DOE. Otherwise, DOE shall own all inventions that are conceived by Laboratory in the course of providing assistance and any inventions that are first actually reduced to practice by Laboratory in the course of providing the assistance, even if the inventions were previously conceived by the Requester(s).

During the period of assistance or within 30 days after completion of the assistance, Requester may request permission to assert copyright on copyrightable materials or elect title to inventions conceived or first actually reduced to practice by Laboratory in the course of providing the assistance by a) coordinating with Laboratory to identify the name and the copyright number of the copyrightable materials or the name and invention disclosure number of the invention, and b) providing written notification to DOE Patent Counsel of Requester's decision to assert copyright or take title. If Requester does not request permission to assert copyright or elect title within 30 days after completion of the assistance, or if Requester notifies Laboratory that Requester will not assert copyright on copyrightable materials or elect title to an invention, then Laboratory may assert copyright or elect title.
